ENGLISH LANGUAGE

Read the passage and answer the questions 1 – 5

Standard English refers to the authoritative and correct usage of the language, the medium of expression for government and expression. Its opposite is a dialectal variant of the language, that is, accepted and recognized words, expressions and structures peculiar to a smaller group of language users who are generally set apart from standard usage by cultural group or geographical region. For example, Nigeria, America, Irish and British English differ from one another in many respects and each is identifiable, yet in every case the standard variety approaches a single and hypothetical classification known as international English. As one moves towards informality and away from the observance of strict rules, emphasis falls on the difference between dialects. In addition to American English being distinguishable from British English, it is also true that British English is not uniform within the United Kingdom. The level of formality is determined by education and aspiration, while dialects vary from region to region.

**THURSDAY, SEPTEMBER 28TH,
2006 USE OF ENGLISH (001)**

Politics in pre-colonial times did not involve the partisan type of electioneering campaign that we now have. The society was ruled by a king or an emir and his traditional chiefs or by the council of elders.

A host of unsung and unrecorded regents and at times women village rulers abound especially in the present Ondo

State where some influential traditional female chiefs and regents still exist. The history of the various towns and villages of the period could boast of women who were actively engaged in the running of government.

In the Igbo society, a rise to leadership position was through demonstrated ability in fostering societal survival rather than heritage. Women's voice in the politics of each clan was given focus through the guild of daughters or the market women's guild. Women through these organs could make their feeling known on any issue affecting their community as a whole or females in particular. Thus unpopular edicts or decrees could be revoked or revised as a result of mounted pressure from these female associations. No decision was usually taken by the men without prior consultation with the leaders of the women's groups.

It must be however emphasized that the degree of women's participation in politics was much limited when compared with that of men.

1. According to the author, electioneering campaign is the approach

Read the passage carefully and answer the questions that follow

The preparation which a study of the humanities can provide stems from three observations about education in our world of accelerating social and technological change. First with the rate of change we cannot hope to train our students for specific technologies. That kind of vocational education is obsolescent. By the time, the specific training will have been completed, the world will have moved on if our education consists of narrow training, we will not be prepared to change second and paradoxically, what our students desire from their education is preparation for specific careers, business, engineering, medicine, computer programming and the like, but we will not be able to train them for life-long career. Their confronting the depressed job market gives our students a certain anxiety, but the solution they seek in vocational training is not sufficient. Third, we sense in our students a narrowing materialism, with the good life defined in terms of material comfort. Education then means learning to do a job which will make money. I see in this definition a limiting sense of what education and the life thus offer, a definition which excludes joy and meaning –our approach to the study of the humanities responds to these three related problems. In our changing, yet narrowing world, the teaching of the humanities finds one powerful justification – it teaches students how to think.

 - b. It helps students to acquire money later when they are employed
 - c. It makes them anxious for a job in the market
 - d. It cannot help students to cope with the rapid changes in the world
